DEDICATIONS

I dedicate this work to my almighty God for the strength he rendered me to do this piece of work despite going through the most difficult moment of my life after the loss of my beloved dad Mr. Daniel David Chinzi Zulu. Dad, I would have loved you to see me graduate. However, I will always cherish your encouraging and inspiring words which always gave me zeal to move on. Dad, I miss you so much and am sure that I will always feel the gap that your departure has created.

Special dedications also go to my mum, Mrs. Sylveria Isaac Sakala Chinzi for being there for me, my sisters Francisca, margarate, Grace, Winfridah for their encouragement, financial and moral support. May God richly bless you all.
ACKNOWLEDGEMENTS

It is indeed my pleasure at the end of the work like this one to express my deepest thanks to those who contributed in any way to its completion. I thank the almighty God for his faithfulness, for it is by his grace that I managed to do this work despite the loss of my beloved dad in the process of my dissertation writing.

A special word of gratitude go to Dr Thera Rasing my supervisor who in immeasurable ways not only offered professional and academic advise but also encouragement and moral support throughout the dissertation writing. A special word of gratitude goes to Dr Patrick Mumbi my co-supervisor for his tireless dedication to the work.

I am very indebted to my lecturers in Gender Department, Dr Kusanthan, Dr .F. Gadsden and Dr Mubiana Macwan’gi for their highly professional and expert guidance during my study programme without which the success of this study would not have been possible.

I also pay tribute to the teachers of the high schools where I did my study namely; Libala, Munali Boys, Arakan, and Kabulonga Girls. Special thanks go to Ministry of Education Headquarters HIV/AIDS focal person Mrs. Saili.

I cannot fail to express my appreciation to Prof. Michael Kelly, Fr. John Yanko Mudjrica and Mr. Malinda Ministry of Education, Teacher Education Department (TED) for their guidance and material support in form of documentation.

Finally, I would like to thank my colleagues in my postgraduate Gender studies class Chisha Chungu, Benmerry Lulambe, Redges Muleya Mubiana and my special friend Bernadette Mwakacheya for your guidance, encouragement and moral support. Special thanks go to my niece Ireen Chinzi Zulu for those cups of coffee on my study table and encouragement when I felt like giving up. You really gave me the strength to move on. Not forgetting my good friend Borniface Katongo Mulenga for your support. To you all I say, may the lord richly bless you.
ABSTRACT
The main purpose of the study was to investigate the impact of the Human Immunodeficiency Virus (HIV) and Acquired Immune Deficiency Syndrome (AIDS) workplace awareness programmes on high school teachers, knowledge, attitudes and sexual behaviour. The study assessed the impact of the HIV and AIDS workplace programmes in high schools between the periods of 2004 to 2010 in Lusaka urban.

To pursue this very important study, both qualitative and quantitative research approaches were used. Qualitative research was used to gain insight into people’s attitudes, behaviour, value systems or lifestyles. This approach was preferred because the techniques used aimed at obtaining response on what teachers know, think and feel about workplace awareness programmes on HIV and AIDS. In-depth interviews and semi-structured questionnaires were the main research instruments. The target population included all the High School teachers in Lusaka Urban. The study used stratified random sampling to select teachers. It was restricted to 100 high school teachers both male and female. Eighty (80) respondents administered self-administered questionnaires. Purposive sampling method was used to select 20 participants to be interviewed.

Findings of this study revealed that basic knowledge on HIV and AIDS on how it can be transmitted and prevented were universal to all high school teachers. Although most high school teachers had basic knowledge on HIV and AIDS, they did not have enough knowledge on other matters concerning HIV and AIDS such as Mother to Child transmission, condom use, VCT and treatment. Some myths that surround the pandemic manifested in their attitude and behaviour when measures were put forward in trying to curb the pandemic.

Although much documentation has been put in place at the Ministry of Education concerning HIV and AIDS workplace awareness programmes implementation in high schools, the situation in high schools was different. This was because some teachers in some high schools did not have much information on workplace awareness programmes an indication that not much was done at high school level.

## CHAPTER ONE: INTRODUCTION

1.0 Introduction .................................................. 1
1.1 Background Information ........................................ 1
1.2 Statement of the problem ........................................ 4
1.3 Objectives .................................................. 5
1.5 Research Questions ............................................ 5
1.6 Significance of study .......................................... 6
1.7 Limitation of study ........................................... 6
1.8 Definition of operational terms ................................ 7

## CHAPTER TWO: LITERATURE REVIEW

2.0 Introduction .................................................. 8
2.1 Background information ...................................... 8
2.2 Modes of transmission of HIV and AIDS .................... 9
2.3 Knowledge about HIV and AIDS ............................ 10
2.4 Attitudes and behaviour towards HIV and AIDS .......... 11
2.5 Gender and HIV and AIDS.................................................................13
2.6 How social cultural norms affect HIV and AIDS Workplace Awareness Programmes on high school teachers.........................................................18

CHAPTER THREE: METHODOLOGY............................................................21
3.0 Introduction........................................................................................21
3.1 Research design .................................................................................21
3.2 Study setting......................................................................................22
3.3 Target population.............................................................................22
3.4 Sampling and data collection procedure..........................................23
3.5 Pre-testing the methodology..............................................................24
3.6 Data collection tools ........................................................................25
3.7 Data analysis.....................................................................................25
3.8 Ethical considerations.......................................................................25

PRESENTATION AND DISCUSSION OF THE FINDINGS

CHAPTER FOUR: KNOWLEDGE ON HIV AND AIDS
4.0 Introduction.......................................................................................26
4.1 Basic information ............................................................................26
4.1.1 Marital status of the respondents’ in relation to sex.................................27
4.2.0 Knowledge on HIV and AIDS.........................................................28
4.2.1 Activities of HIV and AIDS workplace awareness programmes in high schools under study.................................................................28
4.3.0 Attitudes, beliefs and Sexual practices about HIV and AIDS .................35

CHAPTER FIVE: ATTITUDES, BELIEFS AND SEXUAL PRACTICES ON HIV AND AIDS.
5.0 Introduction ..........................................................................................................................47

5.1 Respondents’ responses on whether they used condom during Sexual intercourse.................................................................48

5.2 Respondents’ responses on how often respondents used condoms during sex........................................................................................49

5.3 Respondents’ thoughts on whether condoms reduced sexual pleasure. ..................51

5.4 Respondents’ beliefs on whether female condoms can cause complications when pushed in the womb of a woman during sexual intercourse............................52

5.5 Respondents’ beliefs on whether prolonged use of condoms had a negative effect on the sexual performance of a man..........................................................53

5.6 Respondents’ view on whether they practiced multiple sex......................................54

5.7 Respondents’ responses on whether they had been tested for HIV before. .................................................................56

5.8 Factors that led respondents’ to go for HIV test..........................................................58

5.9 Respondents’ responses on whether they could tell other people if they tested HIV positive......................................................................................60

5.10 Respondents’ thoughts on whether HIV and AIDS is just like any other disease and did not deserve the attention it was getting........................................62

CHAPTER SIX: KNOWLEDGE ON HIV AND AIDS WORKPLACE AWARENES PROGRAMMES.

6.0 Introduction..........................................................................................................................64

6.1 Respondents’ responses on whether they had HIV and AIDS focal point persons in their schools.................................................................64

6.2 Respondents’ responses on sources of information on HIV and AIDS at workplaces.....................................................................................65

6.3 Respondents’ on how often they attended seminars and workshops on HIV and AIDS awareness........................................................................66

6.4 Respondents’ responses on who organises the workshop on HIV and AIDS
awareness they attended……………………………………………………………………………67

6.5 Respondents’ responses on which services were available to high school teachers on HIV and AIDS workplace awareness programmes…………………………70

CHAPTER SEVEN: ATTITUDES AND SEXUAL PRACTICES AT WORKPLACE

7.0 Introduction……………………………………………………………………………………..71

7.1 Respondents’ responses on whether HIV and AIDS workplace awareness Programmes in high schools helped change the behaviour of teacher………………………………….71

7.2 Respondents’ responses on the impact of deaths as a result of HIV and AIDS of school teachers on fellow high school teachers…………………………………………72

7.3 Whether there was adequate provision to ensure that teachers living with HIV and AIDS, particularly female teachers were involved in the design, implementation and monitory programmes at workplaces…………………………73

7.4 Whether HIV and AIDS workplace awareness programmes contributed to equitable access to the health care and treatment options for both male and female teachers……………………………………………………………………75

7.5 Respondents’ responses on whether HIV and AIDS workplace awareness programmes helped to overcome HIV and AIDS related discrimination in relation to access to service and opportunities to condition of services………………76

7.6 Respondents’ responses on what they thought about having many activities of HIV and AIDS workplace awareness programmes…………………………………79

7.7 Respondents’ response on those who said that teachers suspected to be HIV positive were been discriminated against by fellow teacher and how they were being discriminated against………………………………………………82

7.8 What respondents’ thought were the contributing factors to multiple sex among high school teachers……………………………………………………………83
CHAPTER EIGHT: SUMMARY, CONCLUSION AND RECOMMENDATIONS

8.1 Summary..................................................................................................................86
8.2 Conclusion...............................................................................................................90
8.3 Recommendation....................................................................................................91

Reference.....................................................................................................................92

APPENDICES

APPENDICES 1: A questionnaire .................................................................................96
APPENDICES 2 Interview Guide .................................................................................109
APPENDICES 3 Informed consent.................................................................................111

APPENDICES: 4 Permission letters to conduct a study
To conduct a pre-test at Olympia High School...............................................................113
To high schools where the study was conducted..............................................................114
To District Education Board Secretary...........................................................................115
